

More about endangered animals

In addition to animals living on land, there are other animals under threat of extinction.

We should protect animals.

Don't forget us, animals living in the water!

Chinese white dolphins 中華白海豚

THEIR colour changes in different growth period. They are black at **birth** and pink grey with **spots** at a young age. The spots **fade** when they become adults. Heavy sea traffic and water pollution are threatening their life.

Chinese alligators 揚子鱷

YOU can only find them in China. They live along the lower Yangtze River (揚子江) in Jiangsu (江蘇) and Anhui (安徽). They are smaller than other alligator species. Their population is declining due to loss of habitat to farmland.
