Testing the waters

TO help lower the use of single-use plastic bottles, a drinks maker is using recycled plastic for its bottles and setting up water fountains. Swire Beverages will only use recycled plastic for its plastic bottles and is installing 300 machines that provide both hot and cold water. This is to encourage Hongkongers to bring their own water bottles. The company is even thinking of rewarding people for returning plastic bottles so that they can be recycled. Swire Beverages said the water fountains will be set up in schools, shopping centres, country parks and petrol stations. Customers can pay for the water using their Octopus cards or Alipay.

We should all bring our own water bottles!

Yes, and we should refill them at water fountains!
